## SLIMMING

### ULTRASONIC CAVITATION

R590

Ultrasonic Fat Cavitation is a non-surgical treatment used to contour the body in both men and women. The procedure uses the latest technology to target unwanted layers of stored body fat and converts it into liquid form, which can be used and naturally eliminated from the body. The result is immediate centimetre loss after the first treatment.

A safe and pain-free way of removing excess fat, Ultrasonic Fat Cavitation is highly effective in reducing fat in stubborn areas such as: hips, thighs, stomach, love handles, buttocks.

### RADIO FREQUENCY

R590

You can use the treatment on both the face and body. RF therapy can tighten the loose skin if you have lost a significant amount of weight. The treatments work on the arms, neck, abdomen, or thighs. After just a few sessions, this excess skin will appear firmer.

### LASER LIPOLYSIS

R590

Non-Invasive, radiates through the skin to target fat deposits under the skin. Lipo laser treatment removes the fat deposits and tightens the skin at the same time.

### CRYOLIPOLYSIS (FAT FREEZE)

R1500

The goal of Fat Freeze is to remodel the shape of the body and improve bulges of resistant fat. The concept of this procedure is to freeze fat cells into crystals which causes the fat cell to be destroyed. This destroyed fat cell is then slowly metabolized by natural pathways of the body over a period of 3 to 4 weeks.

Fat Freeze cooling only damages fat cells and other tissues at the treatment site are not affected. The dead fat cells are swept away and discarded by the body's normal metabolic process.
